

## Compact but flexible

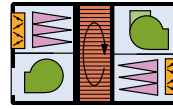

A very flexible unit,  
– the right unit in the right place.

EC can be supplied in any version ranging from a simple supply and exhaust air unit with dampers, filters, heat recovery unit and fans, right up to the more comprehensive unit with air heater, air cooler, COOLMASTER® humidifier, COOLER cooling unit, inspection sections, electrical cubicle (electrical and control unit), and silencers.

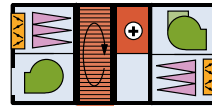

The length of the unit depends on the components selected. As an example, a unit with short filter and direct-driven fan may be shorter than the version with a long filter and belt-driven fan.

The dampers may be located on the outside of or inside the casing.

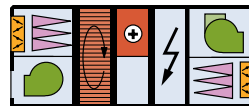

The examples illustrated here show some combinations with rotary heat exchanger.

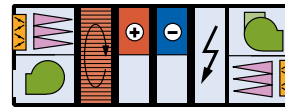

Unit with dampers, filters, heat recovery unit and fans.

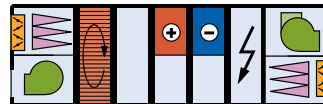

Unit with air heater.

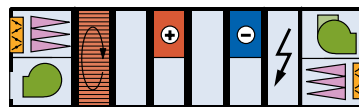

Unit with air heater and electrical cubicle.

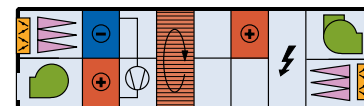

Unit with air heater, air cooler and electrical cubicle.

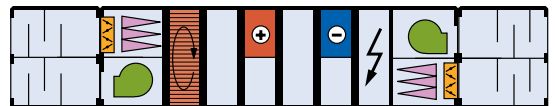

Unit with inspection section, air heater, air cooler and electrical cubicle.

Unit with inspection section, air heater, inspection section, air cooler and electrical cubicle.

Unit with cooling unit, inspection section, air heater and electrical cubicle.

Unit with inspection section, air heater, inspection section, air cooler, electrical cubicle, and silencers.
